FUNCTION: Plays an important role in growth control. Its major role in stimulating body growth is to stimulate the liver and other tissues to secrete [GF-1. It stimulates both the differentiation and proliferation of injublasts. It also stimulates amino acid uptake and protein synthesis in muscle and other tissues. Subcriticlar LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

```
chimeric profess as an intramolecular chaperone (IMC) for the linsuin precursor, enabling it to fold correctly. A cleavable peptide linsuin precursor enabling it to fold correctly. A cleavable peptide of the chimeric protein to be removed after folding has taken place. Production of recombinant human insulin via an hGH-proinsulin chimeric protein can provide human insulin with correctly linked cystein cridges with fewer necessary procedural steps, and hence resulting in a higher sequences from intracellular degradation by a microorganism host, but also promote the folding of the fused lossing procedural in the first of the first of processory (section of the first of the first of precipitation of the first of the first of precipitation is the first of precipitation in the first of the fir
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    interactions among the tuston proteins, thus a leaving fidding of the fused boson is promised as recentrally used that can entrations, the procedural stage of commandations are astably as sufficient ones. The and related purification steps can thus be officiented by along with the use of high concentrations of mercaptan or the use of hydrophobic

```
Human growth hormone seqment, used at the N-terminal of a fusion protein, which contains a thrombin recognition site, and himan beta nerve growth factor (beta-NGF) at the Citeminal. Beta-NGF can be used to control geriatric dementia and other nervous disorders, and can be released from the fusion protein by incubation with thrombin (see AAN90577-8, AAP91034, AAP91299).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 MEPTIPLSRLFUNAMLRAHKLHULAFDTYQEFEEAYIPKEOKYSFLUNPOTSLSFSESIP 60

The cleavable of the insulin precursor enabling it to foid correctly. The cleavable of the chimeric protein to be removed after folding has taken place. Production of recombinant human insulin as high profits and provide human insulin with the chimeric protein controlling with the chimeric protein can provide human insulin with the chimeric protein controlling in a higher yield of human insulin. The last sequences not only protect insulin sequences from intracellular degradation by a microorganism host, but also proceed insulin precursor, inclinate the

The procedural steps of cyanogen bromide cleavage, oxidative suphtholysis and related putilication steps can thus be eliminated, along with the use of high concentrations of mercaptan or the use of hydrophobic absorbest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 MEPTIPLSRIFONAMLRAHRIHQIAFOTYQEFERAYIPKEQKYSFIQNPQTSLSFSESIP 60

                                                                                                                                                                                                                                                                                                         Gaps
                                        The invention consists of a vector contq. a fusion protein which is formed by inquting, downstream of a promoter, hGH or a deriv. (pref. formed by subtstn. of Met.-14 with Leu) and a foreign protein. Stability of the vector in the host is greatly increased so the protein yield is higher. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antirangiogenic peptides - comprise N·terminal fragments of

peptides can be used for proventing the properties of malignant tumours, angiotobroma, arteriovenous malformation, arthritic such as rheumatoid arthritis, atheroscientics plaques, corneal graft neovascularisation, delayed wound healing, proliferative retimopathy such as thematoid cally proliferative retimopathy such as those occurring in haemophilic joints, inapprepriate vascularisation in wound healing such as hyportrophic scars or keloid scars, recovascular diancoma, ocular tumour, uvertis, non-union tractures, usiet where syndrome, psoriasis, pyoquent alourema, tractured libroplasia, schroderra, soil tumours, wascular disorders such as tollicular and luteal cysts and conformation in peptides can be used in quent therapy. The measurement of abnormal levels of N-terminal tragments of hGH, hGH-V, prolactin or hPL can be used in assays for impairment of vascular development associated with pre-elampsia, intrauterine growth retardation, and placental
hormone variant (hGH·V), or human prolactin. Such peptides (i) inhibit, capillary endothelial cell proliferation and organisation (ii) inhibit, anglogenesis in chick chorioallantoic membrane and (iii) binds to at least one specific receptor which does not bind an intact full length hGH, hPL, prolactin or hGH·V. The invention also describes a method for diagnosing a probable abnormality of placental vascularisation during preparacy. The poptides can be used for treating an anglogenic disease in a subject, for inhibiting tumour formation or growth in a patient or for modulating vascularisation of a patient's placenta. In particular, the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 MFPTIPLSRLFONAMLRAHRLHOLAFOTYQEFEEAYIPKEQKYSFLONPQTSLSFSESIP 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A recombinant human nerve growth factor beta subunit-contg, protein can be produced as this fusion protein. It is purified by contacting a gel having a cation exchange gp. with the fusion protein, in the presence of urea. The purified protein is useful in a medicament for treating disorders of the nervous system, eg dementia. (Updated on 25-MAR-2003 to correct PF field.)

The polypeptide (AAPB1226) with somatomedin-like activity and the DNA (AANB1605) encoding it are claimed. A Met resicual gp. may be added to the Niterminal. The polypeptide acts on the bone structure of mammals, including humans, to promote bone growth. The polypeptide has high production rate and is easily extracted from bacterial culture medium and refined for use as a bone growth accelerator. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                   The protein is a direct translation of the upstream tryptophan promoter operator lacking its attenuation sequence and human becance. The product may be efficiently expressed from a transformed E.coli expression system.
                                                                                                                                                                                                                                                                             98.38; Score 462; DB 2; Lought, 252;

The specification describes a method of detecting an exogenously administered substance from a naturally occurring endogenous substance, the exogenous substance being tagged so that it fluoresces differently from the endogenous one at a suitable wavelength. The tagging may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        consist of one or more substitutions in tagged growth hormone selected from G40Y. F22Y, W86F, Y, L, I or V F10Y or 1137Y; The method is used to distinguish between exogenously administered substances as compared to naturally occurring endogenous substances. Especially mentioned is the illegal misuse of growth substances by atthletes or in domesticated farm animals e.g. cattle. The present in the method of the invention.
                                                                                             Detection; fluoresce; illegal misuse; growth substance; athlete; domesticated farm animal; cattle; human growth hormone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     22kDa growth hormone; hGH; mutant; thrombin; resistance;

The prosect invention describes a human growth horoace garant in which the 134th Ara and the 135th Thr are replaced respections by Asp and Properties to the 195th Thr are replaced respections by the plant and the 195th and which has a resistance addings decemposition by thrombin. The present sequence represents the natural half. Also and the 140th Lys are replaced respectively by Asp. Pro and Ala in the amino acid sequence of natural type holf and which has a resistance against decomposition by thrombin and pleasn, and (2) a drug preparation containing the above holf mut at as the active component. The mutant, holf shows a nactivity approximately equivalent to that of natural type holf and blood and body fluid.

Sequence 191 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           õ
Somatotropin 2 precursor - human
NiAlternate names: growth hormone 2; growth hormone variant; höil-V; placental somatotrop
NiContains: somatotropin 2, long splice form; somatotropin 2, short splice form
NiContains: somatotropin 2, long splice form; somatotropin 2, short splice form
C; Species: Homo saplens (man)
C; Date: 17-Dec-1982 *sequence_revision 10-Feb-1995 *text_change 21-Jul-2000
C; Accession: D32435; B28072; A01511; 152104; A60711

A:Title: Cloning and nucleotide sequence of placental hGH-V cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A:Molecule type: protein
A:Residucs: 27-44;46-57 cFRA>
A:Experimental Source: Lissue placenta
A:Note: partial quyocosylation was demonstrated by lectin binding
C:Comment: This qene is expressed by the placenta.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 217;

The primary structure of monkey pituitary growth hormone.";
Arch. Biochem. Biophys. 245.287-291(1986).
I FUNCTION: Plays an important role in growth control. Its major role in stimulating body growth is to stimulate the liver and other tissues to secrete IGF-1. It stimulates both the differentiation and proliferation of myoblasts. It also stimulates among acid uptake and protein synthesis in muscle and other

Independent duplication of the growth hormone gene in three
Anthropoidean lineages.'
Submitted (APR-2001) to the EMBL/GenBank/DDBJ databases.
FPUNTION: Plays an important role in growth control. Its major
Fole in stimulating body growth is to stimulate the liver and
other tissues to secrete IGF-1. It stimulates both the
differentiation and proliferation of myoblasts. It also stimulates
amino acid uptake and protein synthesis in muscle and other
tissues (By similarity).
Figure Edition: Secreted.
                                                                                                                                                                                                                                                                                                                                                28-FEB-2003 (Rel. 41, Last sequence update)

"Cloning and characterisation of a putative growth hormone encoding gene from the marmoset (Callithir jacchus)."

Submitted (AUG-2000) to the EMBL/Genbank/DDBJ databases.

FUNCTION: Plays an important role in growth control. its major rele in stimulative body growth is to stimulate the liver and other tissues to secrete (DP-1). It strandates both the differentiation and profile myd-lasts. It also stimulates amino acid uptake and protein synthesis in muscle and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
